A practical review mechanism for turning enterprise account learning into a coherent product roadmap.

FOUR EXPLICIT DISPOSITIONS

- CONFIGURE** The shared product solves the need. Bound mapping or interface variation without creating a new branch.
- PROTOTYPE** A pattern may recur. Build the smallest test that answers a behavior, data, authority, or outcome question.
- PRODUCTIZE** The need repeats, its economics work, and evidence supports a reusable primitive with defined ownership.
- DECLINE / DEFER** Weak leverage, unclear authority, excessive support burden, or no evidence-backed product path.

REVIEW INPUTS

- Client outcome and urgency
- Current product coverage
- Data and integration requirements
- Human authority and failure consequences
- Repeatability across accounts
- Support and maintenance burden

MINIMUM DECISION RECORD

Client outcome | shared capability | legitimate delta | evidence gap | disposition | owner | next decision

REQUIRED OUTPUTS

- One explicit disposition
- Evidence and assumptions
- Decision owner
- Engineering dependencies
- Client communication
- Learning returned to roadmap and next account

Weekly review and prototype handoff

Operator-technologist | Client-to-product systems | Agentic workflow builder

Pittsburgh, Pennsylvania | 412.287.8640 | russelldudek@gmail.com
linkedin.com/in/russelldudek | https://russelldudek.github.io/TalentPluto/

WEEKLY CLIENT-TO-PRODUCT REVIEW

- 0-10 MIN Client outcomes and urgent exceptions
- 10-20 MIN Pattern detection across accounts
- 20-35 MIN Prototype evidence and failure modes
- 35-50 MIN Roadmap disposition and owner
- 50-60 MIN Learning return and client communication

PROTOTYPE HANDOFF CONTRACT

- Problem and user
- Desired outcome and success measure
- Data context and quality assumptions
- Agent/workflow boundary
- Human authority and escalation
- Evaluation method and failure modes
- Known constraints and support burden
- Owner, expiry, and next decision

DECISION FILTERS

Client value | repeatability | strategic fit | evidence confidence | integration/support complexity | time-to-learning | reversibility | human-authority clarity

ILLUSTRATIVE SCORECARD

CLIENT OUTCOME	Time-to-value, adoption, attributed outcome, executive confidence
PRODUCT LEVERAGE	Accounts served, configuration reuse, roadmap confidence
OPERATING QUALITY	Completeness, cycle time, recurring defects, support load
LEARNING SPEED	Time to tested assumption, evaluation completion, decision latency
TRUST / AUTHORITY	Exceptions, escalations, unresolved boundary decisions

Boundary: this artifact is an operating hypothesis for discussion, not a claim about the confidential partner's current process.
