

Turn customization into product leverage

Operator-technologist | Client-to-product systems | Agentic workflow builder

Pittsburgh, Pennsylvania | 412.287.8640 | russelldudek@gmail.com

REAL MANDATE

Own a small portfolio of enterprise outcomes while installing the mechanism that converts repeated client needs into a coherent roadmap, bounded agent prototypes, and production-minded engineering handoffs.

CENTRAL OPERATING CONTRADICTIONS

- Deliver immediate client value without creating a permanent custom-services branch.
- Prototype quickly without hiding data, authority, evaluation, or failure risk.
- Give enterprise customers confidence while keeping a small team's decision burden low.
- Use founder judgment now while making the decision logic reusable for the next account.

CANDIDATE THESIS

Separate the shared core from the legitimate client delta, reduce the key uncertainty with the smallest credible prototype, then make an explicit configure, prototype, productize, or decline decision.

OPERATING MODEL

1. ACCOUNT BRIEF

Outcome, stakeholders, data, constraints, decision owner, and success evidence in one record.

2. CORE / DELTA MAP

Identify what the shared product already solves and what variation is genuinely bounded.

3. PROTOTYPE EVIDENCE

Test the smallest behavior that can resolve the key product, data, authority, or outcome question.

4. ROADMAP DISPOSITION

Configure, prototype, productize, or decline - with an owner and next decision.

5. LEARNING RETURN

Convert the result into a reusable primitive, playbook, standard, or explicit non-pattern.

Evidence, objection, and discovery

VERIFIED EVIDENCE

- Vape-Jet: integrates customer, machine, engineering, ERP, quality, production, and support signals into prioritized work.
- DudeWorth: builds AI-readiness and agentic workflow mechanisms around value, context, human authority, evaluation, escalation, and governance.
- Amazon: launch discipline, customer-backward execution, Lean/Gemba operating routines, and high-volume delivery accountability.
- Compunetics: cross-functional technical translation across engineering, manufacturing, quality, and high-consequence customers.

STRONGEST PLAUSIBLE OBJECTION

The role is labeled Associate and asks for at least one year of relevant experience; Russell brings materially broader operating depth. The useful question is not whether the chronology is junior. It is whether the company wants a hands-on operator who will personally manage accounts, prototype, document, and create repeatable mechanisms without demanding a large team or inflated title.

EXECUTIVE INTERVIEW QUESTIONS

- Where does enterprise customization create the most hidden rework today?
- What evidence must exist before a prototype becomes an engineering commitment?
- Which customer outcomes are repeated enough to become product primitives?
- How are founder roadmap decisions captured for the next account?
- What would make this hire unquestionably valuable by day 90?
- Public copies conflict between remote and five-day New York City. What operating model is actually required?

SOURCE INTEGRITY

The supplied Ashby URL resolves to a different Valon role. This campaign uses the pasted TalentPluto Strategy & Operations Associate description and does not blend Valon claims, compensation, logistics, or company facts into the application. The confidential partner remains unidentified.
