

Interview Thesis Brief

Enterprise requests should become explicit product decisions

Russell Dudek | Pittsburgh, Pennsylvania | 412.287.8640

Treat every enterprise request as a client-to-product decision - not a ticket.

Preserve customer intent and context, define the smallest proof, and make the product disposition explicit before work becomes roadmap commitment.

Actual work

Own enterprise outcomes while turning onboarding, customization, attribution, data, and agent needs into coherent roadmap decisions and production-minded prototypes.

Company moment

The supplied role suggests a small AI-search company scaling high-touch enterprise work. The source-grounded hypothesis for discovery: repeated client requests must become product learning faster than delivery complexity grows.

Operating tensions

Tension	Failure mode	Operating response
Enterprise specificity vs. product coherence	Important accounts become silent forks.	Parse shared core and legitimate variation before building.
Prototype speed vs. production confidence	Demos create hidden commitment and rework.	Define authority, evaluation, failure modes, owner, and next decision.
Client urgency vs. reusable economics	Roadmap attention follows noise rather than leverage.	Balance value, repeatability, support burden, confidence, and learning speed.
Founder judgment vs. scalable memory	Context stays in conversations.	Use one shared request brief and decision record.

Client-to-Product Translation System

Intent	Context	Constraint	Smallest proof	Reuse signal	Disposition
Decision and desired customer outcome	Workflow, data, stakeholders, owner	Authority, risk, time, integration	Minimum test that reduces uncertainty	Pattern, primitive, playbook, or rule	Configure, Prototype, Productize, or Decline

Client result

Time-to-value, adoption, useful outcome

Product leverage

Reusable primitive, pattern, or rule

Operating quality

Handoff completeness, rework, support burden

Learning speed

Time from ambiguity to explicit disposition

Interview Thesis Brief

Evidence, immediate contribution, and executive questions

Russell Dudek | Pittsburgh, Pennsylvania | 412.287.8640

Evidence-to-role map

Role need	Verified evidence	How I would contribute
Enterprise account ownership	Vape-Jet cross-functional customer/support/engineering work; Compunetics high-consequence customer delivery.	Read stakeholder context, create visibility, and maintain outcome ownership.
Roadmap from client needs	Connects factory, field, customer, machine-fleet, CRM, ERP, telemetry, and issue signals into prioritized work.	Convert recurring account friction into explicit product decisions.
Prototype products and agents	Designs agentic workflow patterns with retrieval, human judgment, escalation, decision records, evaluation, and governance rails.	Build bounded prototypes that test task fit and authority rather than only interface concepts.
Startup intensity	Vape-Jet AI-first transformation; Amazon 24/7 Prime launch; first remote regional operation at Cardinal.	Move directly between strategy, systems, messy execution, and accountability.
Technical/client bridge	Engineering, manufacturing, quality, and customer programs in advanced electronics; technical publishing and presentations.	Translate without flattening technical constraints or business outcomes.

Hands-on fit

- Works directly in operating workflows and mechanisms.
- Comfortable moving from discovery to prototype to cadence.
- Uses senior operating depth to compress learning, not inflate hierarchy.
- Preserves human authority and evidence inside AI-enabled work.

Working session

Use a sanitized request. In 45 minutes: frame the intent; identify context and constraints; sketch the smallest proof; define evaluation and authority; choose a disposition; and write the product/engineering handoff.

Executive questions

1. Where does enterprise customization create the most product learning - and the most hidden rework?
2. What evidence must exist before a prototype becomes an engineering commitment?
3. Which customer outcomes are repeated enough to become product primitives?
4. How is founder roadmap judgment captured so the next account benefits?
5. What would make this hire unquestionably valuable by day 90?
6. Which work should this role stop doing as the company scales?

Evidence boundary

The confidential partner is not identified. This brief uses the supplied role description and labels company-state assumptions as hypotheses for discovery rather than internal facts.
